Capstone design for Manufacturing Engineering Programme at UKM

Prof Dr Dzuraidah Abd Wahab Course coordinator KKKP4274 Product Design

Product Design KKKP4274

- A compulsory course for final year Manufacturing Engineering Programme
- Assessment method Continous assessment that includes Project presentation (design brief, progress presentation; final presentation), Design report, Tests
- Design teams of 3-4 students in a group
- General design theme : Design for life improvement

Course synopsis

 This course provides exposure, knowledge, understanding and synthesis for a systematic development of product design using the engineering design methodology. During the course, students will be introduced to the basic methods and techniques to develop products from information search to the concept design and detail design stages with considerations on product life cycle requirements in view of developing a sustainable product design. Students are expected to work in groups in order to develop a product design which will be assessed through project reports and oral presentations.

- KKKP4274 has recently been revised to take into consideration requirements of the Engineering Accreditation Council, with emphasis on societal, environment and safety
- Engineering Accreditation Council (EAC) is the body delegated by Board of Engineers Malaysia (BEM) for accreditation of engineering degrees.
- The duty of BEM is to ensure that the quality of engineering education/programme of its registered engineers attains the minimum standard comparable to global practice.

Programme Outcomes measured in KKKP4274

- **PO2 Problem Analysis** Identify, formulate, research literature and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences;
- PO3 Design/Development of Solutions Design solutions for complex engineering problems and design systems, components or processes that meet specified needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations;

- PO5 Modern Tool Usage Create, select and apply appropriate techniques, resources, and modern engineering and IT tools, including prediction and modelling, to complex engineering activities, with an understanding of the limitations;
- PO6 The Engineer and Society Apply reasoning informed by contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to professional engineering practice;

- **PO7 Environment and Sustainability** Understand the impact of professional engineering solutions in societal and environmental contexts and demonstrate knowledge of and need for sustainable development;
- **PO9 Communication** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions

- PO10 Individual and Team Work Function effectively as an individual, and as a member or leader in diverse teams and in multidisciplinary settings;
- **PO11 Life Long Learning** Recognise the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

DESIGN FOR ASSEMBLY

MINIMIZE ASSEMBLY DIRECTIONS

MINIMIZE NUMBER OF PARTS

Design for Environment (DfE)

Using human force to actuate the Eco-Lawncycle

Design for Remanufacture/Reuse

i. Design for assembly/disassembly

ii. Material Aluminium Alloy and High Carbon Steel

Design for Recyclability

i. Material Aluminium Alloy, High Carbon Steel and Carbon Fibre

Packaging Material – Fill-Air Packaging

Protect surfaces from damage or scratching during distribution

Reusable and Recyclable

DESIGN FOR ENVIRONMENT

THREE MAIN GOAL OF DESIGN FOR ENVIRONMENT:

PROMOTING GREEN CLEANING AND RECOGNIZING SAFER CONSUMER

EFFECTIVELY MANAGE RENEWABLE RESOURCES

IDENTIFYING SAFER CHEMICALS

LOW POWER CONSUMPTIONS

NOT CONSUME MUCH ENERGY

NOT RELEASE TOXICS OR SMOKE DURING OPERATION
